# REPORT.

To the Honorable the Chief Secretary.

SIR,

Melbourne, 31st December, 1860.

I have the honor to submit the following Statistical Report, in continuation of that issued by me on the 31st December, 1859.

2. In the first part of my "*Statistical Notes on the Progress of Victoria, from 1835 to 1860*," I attempted, as briefly as possible, to illustrate the growth of our population during the past quarter of a century, and to show how far the people of Victoria had been successful in developing the animal, vegetable, and mineral resources of the country.\* The taking of the Agricultural Statistics, for the year ending 31st March, 1860, enabled me subsequently to give in rough approximate general summary Tables (published in the *Government Gazette* in August last), still further evidences of progress, and I now purpose not only to reproduce those Tables, finally corrected for permanent reference, but to furnish other detailed Tables for each county; and further still, to give certain information never before collected, which I trust will, in addition to its novelty, prove at once interesting and useful.

## POPULATION.

3. The estimated population of Victoria between the 31st December, 1859, and the 31st December, 1860, is shown as follows:—

TABLE I.—VICTORIA.—POPULATION at the end of each quarter from 31st December, 1859 to 31st December 1860.

Date.	Males.	Females.	Total.	No. of Females to every 100 Males.
31st December, 1859 ...	335,708	194,554	530,262	58·0
31st March, 1860 ...	337,213	196,792	534,005	58·4
30th June, 1860 ...	339,035	199,297	538,332	58·8
30th September, 1860 ...	341,628	203,049	544,677	59·4
31st December, 1860 ...	342,765	205,647	548,412	60·0

NOTE.—The emigration that for some time past has taken place among the Chinese, to the neighboring colonies overland, has not been officially recognised, and the figures here given are therefore probably a few thousands in excess, so far as regards adult males.†

## IMMIGRATION AND EMIGRATION—BIRTHS AND DEATHS.

4. The excess of immigration over emigration, in 1859,‡ was 11,165, but in 1860 it was 7348 only, while the excess of births over deaths amounted,

\* See *Statistical Notes on the Progress of Victoria from the foundation of the Colony*. First series. Part I. (4to.) Melbourne, Ferres, 1860.

† While the proof sheets of these pages were passing through the press, the rough totals of the census of the 7th April, 1861, were made up, and the following is the result: males, 328,651; females, 211,671; total, 540,322. The usual quarterly approximation was likewise calculated to the 31st March, 1861, and the estimate of the population arrived at was, males, 343,318; females, 207,361; total, 550,679. The excess of females, as shown by the census result, may partly be accounted for by unregistered births over the period of four years from the census of 1857 to that of 1861; but the deficiency in the number of males is no doubt mainly due to Chinese and other adults going over the border of Victoria to neighboring colonies.

‡ For Immigration Statistics prior to 1859, see Tables II. to VI., both inclusive, of first part of *Statistical Notes*, pp. 5 to 8.

in that year, to 10,802. The following figures (Tables II and III) show the extent of assisted and unassisted immigration in the latter year, as also the total immigration and emigration, as well as the registered births and deaths.

IMMIGRATION AND EMIGRATION, AND PROPORTION OF THE SEXES.—1860. TABLE II.

TABLE II.—VICTORIA.—The Immigration, assisted and unassisted; the Emigration, and the excess of the former over the latter; also the number of Females to every 100 Males of Immigrants, Emigrants, and excess in 1860.\*

YEAR 1860.	Males.	Females.	Total.	No. of Females to every 100 Males.
Assisted Immigrants ... ..	185	1,551	1,736	838·4
Unassisted Immigrants ... ..	19,381	7,920	27,301	40·9
TOTAL, IMMIGRATION ... ..	19,566	9,471	29,037	48·4
„ EMIGRATION ... ..	17,220	4,469	21,689	25·9
Excess of Immigration over Emigration }	2,346	5,002	7,348	213·2

Small net increase by immigration in 1860.

Relative proportions of the sexes in the excess of immigration over emigration.

5. While 1736 persons only were introduced under the auspices of Government, 27,301 found their way here by private efforts. On the other hand 21,689 persons quitted the colony, leaving only 7348 as the net increase by immigration, which is a smaller result than has taken place since 1848. As regards the sexes, however, it is satisfactory to remark, that although females arrived in the colony at the rate only of 48½ to 100 males, they left it in no greater proportion than 26 to 100 males, so that after deducting the emigration from the immigration, rather more than 213 females remained to every 100 males of the residue, which is a higher proportion of

\* In the last column of Table VI. page 8, of “Statistical Notes Part I,” the total excess of immigration over emigration was furnished for each year, from 1842 to 1859. The following table shows the numbers of each sex, and the number of females to every 100 males in that excess. It will be found useful as a supplemental table indicative of the ratio of the sexes in relation to the net increase by immigration.

TABLE II. (B).—VICTORIA.—The excess of the immigration over emigration of males, females, and both sexes; also the number of females to every 100 males of that excess, during each year from 1842 to 1859 both inclusive.

Year ending 31st December.	Males.	Females.	Both Sexes.	Number of Females to every 100 Males.
1842 ... ..	1,247	925	2,172	74·1
1843 ... ..	decrease	decrease	decrease	—
1844 ... ..	788	437	1,225	55·5
1845 ... ..	2,222	594	2,816	26·7
1846 ... ..	1,479	422	1,901	28·5
1847 ... ..	2,713	315	3,028	11·6
1848 ... ..	3,778	2,788	6,566	73·8
1849 ... ..	7,139	5,487	12,626	76·9
1850 ... ..	4,179	3,277	7,456	78·4
1851 ... ..	8,802	2,925	11,727	33·2
1852 ... ..	46,252	17,374	63,626	37·6
1853 ... ..	29,493	20,376	49,869	69·1
1854 ... ..	28,700	19,735	48,435	68·8
1855 ... ..	27,304	12,872	40,176	47·1
1856 ... ..	10,973	9,434	20,407	86·0
1857 ... ..	35,199	18,585	53,784	52·8
1858 ... ..	21,315	8,971	30,286	42·1
1859 ... ..	4,657	6,508	11,165	139·7
Totals exclusive of the year 1843 ... ..	236,240	131,025	367,265	55·5
Decrease in 1843 ... ..	470	266	736	56·6
Total excess of immigration over emigration, 1842–1859 ... ..	235,770	130,759	366,529	55·5

In the year 1843 the emigration was in excess of the immigration; such a circumstance has not since occurred. By referring to the last column of the Table, it will be seen that the only year in which the net immigration of females exceeded that of males was 1859, when nearly 140 females remained to every 100 males. In no other year were females in a higher proportion than 86 to every 100 males of the residue. For the 18 years (1842–1859) the proportion of females was 55·5 to every 100 males of the residue.

females than has obtained in any year since the foundation of the colony—the nearest to it (but far behind) being in 1859, when nearly 140 females remained to every 100 males of the excess of arrivals over departures.

TABLE III.—VICTORIA.—The BIRTHS AND DEATHS during 1860; the Increase of Births over Deaths during the same Period; the Number of Females to every 100 Males who were Born and who Died; and also the Number of Females to 100 Males in the Increase by the excess of the former over the latter.

BIRTHS AND DEATHS, AND PROPORTION OF SEXES, 1860, TABLE III.

YEAR 1860.	Males.	Females.	TOTAL.	Number of Females to every 100 Males.
Number of Births ... ..	11,845	11,018	22,863	93·0
Do. Deaths ... ..	7,134	4,927	12,061	69·1
Increase by Births over Deaths	4,711	6,091	10,802	129·3
Increase by Immigration over Emigration ... }	2,346	5,002	7,348	213·2
TOTAL INCREASE ...	7,057	11,093	18,150	157·2

6. Of the children born in the colony in 1860 the proportion was 93 females to every 100 males, but of the persons who died it was no more than 69 females to every 100 males, so that in the increase by births over deaths there were above 129 females to every 100 males. It has been already stated that in the net increase by immigration, the females numbered 213 to every 100 males; in the increase from all causes the proportion of females to every 100 males was 157.

Relative proportions of the sexes, in the increase from all causes.

#### LIVE STOCK.

LIVE STOCK.

7. The enumeration of Live Stock at the two periods, 31st March, 1859, and the 31st March, 1860, was as follows :—

TABLE IV.—VICTORIA.—NUMBER OF LIVE STOCK on the 31st MARCH, 1859, and 31st MARCH, 1860, Compared.

NUMBER OF LIVE STOCK IN 1859 AND 1860 COMPARED.—TABLE IV.

DATE.	Sheep.	Cattle.	Horses.
31st March, 1859 ... ..	5,578,413	699,330	68,323
31st March, 1860 ... ..	5,794,127	683,534	69,288
Increase ... ..	215,714	...	965
Decrease ... ..	...	15,796	...

8. The figures here given, of the sheep, represent very nearly the entire number in the colony for each year. With respect to the cattle and horses, however, those kept in stables and stalls in towns, and on the gold-fields, as well as those employed by carters on the roads, are not included. It will be observed that there is an apparent decrease in the number of cattle, and an increase with regard to both horses and sheep.

Cattle and Horses in the towns, and on the gold fields and roads, not included.

Decrease in number of cattle, apparent increase in horses and sheep.

9. The exports of wool and tallow increased largely during the year 1860, but the export of hides and skins, in so far as their declared value is concerned, suffered a diminution.

Increase of Wool and Tallow, decrease of Hides and Skins.

EXPORTS OF WOOL, TALLOW, HIDES, AND SKINS, 1859-1860.—TABLE V.

TABLE V.—VICTORIA.—EXPORTS OF WOOL, TALLOW, HIDES, and SKINS, for 1859 and 1860.

YEAR.				WOOL.		TALLOW.		HIDES AND SKINS.
				Quantity.	Value.	Quantity.	Value.	Value.
				lbs.	£	lbs.	£	£

1860	...	...	...	24,273,910	2,025,066	788,144	18,269	144,236
Increase				2,613,615	268,116	239,792	7,915	...
Decrease				...	...	...	...	28,210
TOTALS, from 1837 to 1860 } (both inclusive) ... }				290,804,287	18,805,704	52,567,016	740,980	811,622

Number of Squatters on the increase, from year to year.

10. The approximate number of acres occupied by squatters in 1856, and the number of licenses issued during each of the last three years are given in the following table, by which it will be observed that in spite of the quantity of Crown land sold, the number of pastoral occupiers continues to increase from year to year.

APPROXIMATE AREA OF SQUATTERS RUNS, 1856, AND NUMBER OF LICENSES ISSUED FROM 1858 TO 1860.—TABLE VI.

TABLE VI.—VICTORIA.—The approximate area of Squatting Runs as ascertained in 1856, and the number of Pastoral Licenses issued during the last three years in each Crown Land Commissioner's district, and in the total of the Colony.

DISTRICTS.				Aggregate extent of Runs in each District estimated in 1856.	Number of Licenses issued.		
					1858.	1859.	1860.
Bourke and Grant	...	...	...	117,980	15	15	16
Gipps Land	...	...	...	1,845,232	89	92	112
Murray	...	...	...	6,132,726	174	179	185
Portland Bay	...	...	...	7,103,306	351	355	359
Settled Districts	...	...	...	858,652	142	141	125
Western Port	...	...	...	6,909,723	246	244	245
Wimmera	...	...	...	9,358,849	162	166	181
Totals	...	...	...	32,326,468	1,179	1,192	1,223

NOTE.—The above aggregate extent of runs, as ascertained in 1856, is in excess of that given in the *Statistical Notes*, Part I. (Table IX., page 11), by the approximate area of those within the Settled Districts (858,652 acres), which quantity was not formerly furnished to me. The numbers of squatting licenses issued in 1858 and 1859 also exceed that given in the table just cited by 142 and 141 licenses respectively, these being the numbers issued in the Settled Districts during each of those two years.

PURCHASE OF LAND.

PURCHASE OF LAND.

New Land Act passed on the 18th September, 1860, 24 Vict., No. 117.

11. On the 18th day of September, 1860, an Act passed the Victorian Legislature (24 Vic. No. 117), for regulating the sale of Crown lands, with a view "to afford greater facilities than have hitherto existed, to persons desirous of engaging in agricultural pursuits." The 1st of November, 1860, was the day fixed for the new law to come into operation, and this date must consequently be recognised as the starting point of a new era of observation. I have, therefore, in the ensuing tables, relating to the purchase of land, brought the figures up to the 31st October, 1860, or the day preceding that when the new Land Act came into play.

Purchase of Land by Squatters.

12. The squatters, up to the end of the year 1859, had availed themselves of their privilege of purchasing land by pre-emptive right to the extent of 277,724 acres, for which they had paid £286,792 12s. 7d., or about £1 0s. 8d. per acre. In the next ten months they purchased, under the same privilege, 41,533 acres, for the sum of £42,673 14s. 1d., being at the rate of about £1 0s. 9d. per acre. The total quantity of land, therefore, that passed from the Crown in this fashion, from the commencement of the colony to the 31st October, 1860, was 319,257 acres (Table VII.). How far they are holders of land purchased at public auction, has yet to be determined.

TABLE VII.—VICTORIA.—LAND SOLD TO SQUATTERS under PRE-EMPTIVE RIGHT, AMOUNT REALISED, and AVERAGE PRICE PER ACRE, in each County and Pastoral District, from the 1st of January to the 31st of October, 1860.

PURCHASE OF LAND BY

13. During the year ending 31st December, 1859, there were 459,081 acres 1 rood and 38 perches of Crown land alienated, or upwards of 81,000 acres more than the average of the previous two years. By Table VIII. it will be seen that the Counties of Grenville, Grant, Hampden, Ripon, and the Unnamed districts were the portions of country wherein the greatest amount of land-selling was effected :—

Most land sold in the counties of Grenville, Grant, Hampden, Ripon, and unnamed districts in 1859.

\* These comprise the "unnamed districts" of the Table published in the first part of *Statistical Notes*.

No. of acres alienated on the average to each individual up to the end of 1858 and 1859.

Prices realised per acre for town, country, and suburban lands in 1857, 1858, and 1859.

14. At the end of the year 1858, the total Crown land alienated from the foundation of the colony was about 6·03 acres to each individual; by the end of 1859 the average had increased to 6·6 acres per head.

15. The rate realised for town lands in 1859 was £143 17s. 1d. per acre, against an average of £165 10s. 3d. per acre for the years 1857 and 1858;\* for suburban lands, £4 16s. 1d. per acre, against £6 8s. 10d. per acre over the same period; and for country lands, £1 7s. 5d. per acre, against £1 12s.; so that a marked declension took place in the realised prices of all descriptions of Crown lands in the year 1859.

Crown Lands Sold up to 31st October, 1860.

16. During the first ten months of 1860, the land was sold in a somewhat larger proportion than during the previous year. This excess however, was wholly in respect to country lands, the quantity of suburban and town lands alienated during the ten months having been proportionately less than in 1859.

CROWN LANDS SOLD BETWEEN 1ST JANUARY AND 31ST OCTOBER, 1860.—TABLE X.

\* See Statistical Notes, Part I, Table XLIV., page 41.

17. The population, on the 30th September, 1860, was estimated at 544,677 souls, and the Crown lands alienated from the formation of the colony to the 31st of October, or one month after that date, amounted to 3,944,239 acres 0 roods 2 perches, thereby making about 7·24 acres to each individual.

18. The amount realised per acre on the total land sales up to the 31st October 1860, was £1 7s. 6d. per acre only, against £1 15s. 6d. per acre in 1859. The most striking decline in the average price was in that of town lands, which declension may partly be accounted for by the fact of inferior situations having been offered for sale. The suburban lots reached a higher average, namely, £5 19s. 10d. per acre, against £4 16s. 1d. in 1859.

TABLE XI.—VICTORIA.—The AMOUNTS REALISED for, and AVERAGE PRICES per Acre of TOWN, SUBURBAN, and COUNTRY LANDS from the 1st January to 31st October, 1860.

Number of acres alienated on the average to each individual, up to 30th September, 1860.

\* See Statistical Notes, Part I, page 42.

Average number of acres alienated to each individual over different years, computed from new divisors.

21. The last column in Table XII., or "average number of acres alienated to each individual," contains results slightly different from those given in *Statistical Notes*, Part I.,\* in regard to the years 1840, 1845, and 1850, as the figures formerly published resulted from the use, as a divisor, of the numbers polled on the Census day (2nd March), instead of those calculated to show the population at the beginning of the respective years. The figures likewise, in the second column indicate, instead of the mean population (as in Table LII. of *Statistical Notes*, Part I.), the total population at the end of each year named. They will be found useful for many purposes, as will also the following supplementary Table of Population distinguishing the youthful and adult population of both sexes.

POPULATION OF BOTH SEXES UNDER AND OVER 14 YEARS OF AGE, 1840-1859.—TABLE XIII.

TABLE XIII.—VICTORIA.—The estimated number of persons of both sexes under and over 14 years of age, on the 31st December of various years from 1840 to 1859.

NOTE.—The Estimates in the above Table have been deduced from the numbers of both sexes under and above 14 years of age polled at the nearest Census to each of the periods.

CULTIVATION OF THE LAND.

#### CULTIVATION OF THE LAND.

Quantity of land alienated and proportion thereof cultivated to the 31st March, 1860.

22. It was found on the 31st December, 1858,† that there had been alienated from the Crown upwards of three millions of acres of suburban and country land (3,033,373a. 1r. 23p.), of which nearly 10 per cent. (9·85) was returned as under cultivation (298,959a. 3r. 0p.), a quantity larger than that of the total breadth of land under crop in Tasmania, South Australia, or New South Wales, in 1858.‡ At the end of 1859, as will be seen by the following Table (XIV.), nearly half a million acres more were alienated, making in all 3,491,314a. 3r. 11p. of suburban and country lots sold. The cultivation on the 31st March, 1860, was found to be 358,727a. 2r. 20p., being an increase on the preceding year to the extent of about 59,768 acres, and making a proportion of 10·27 per cent. of land cultivated to the total suburban and country lands sold to the end of December, 1859, or three months previous to the end of the agricultural year ending 31st March, 1860.

Counties of greatest cultivation in proportion to Country and Suburban lands sold.

23. The county in which the greatest amount of cultivation existed, in proportion to the country and suburban lands sold up to the 31st December, 1859, was Dalhousie, the ratio being 19·62 per cent., or nearly one-fifth. The next in order was Ripon, showing 18·89 per cent; Talbot, 16·49 per cent; Villiers, 14·39 per cent; Bourke, 11·24 per cent; Grant, 10·76 per cent.; and Heytesbury, 10·11 per cent.

Increase of cultivation in all the Counties except Anglesey and Dundas.

24. All the counties showed an increased breadth of land under cultivation, except Anglesey, which fell off from 2150 acres to 1313 acres, and Dundas, in which the amount of cultivation remained (within five acres) the same as during the previous year.

\* Pages 13, 16, and 24.

† See *Statistical Notes*, Part I., Table XLVII., page 44.

‡ For these quantities, see *Statistical Notes*, Part I., footnote to page 43.

TABLE XIV.—VICTORIA.—The Counties and Districts of the whole Colony, their area in square miles and statute acres; the total Country and Suburban Lands Sold up to the end of 1859; the extent of Land in Occupation and of that under Cultivation on 31st March, 1860; the proportions per cent. of the Land in Occupation and of that under Cultivation on 31st March, 1860, to the Country and Suburban Lands Sold up to 31st December, 1859; and the proportion per cent. of the Land under Cultivation on 31st March, 1860, to that in Occupation at the same period.

NOTE.—In Anglesey, Evelyn, Follett, Heytesbury, Polwarth and Villiers, the extent of land in occupation on 31st March, 1860, was apparently greater than the quantity alienated up to 31st December, 1859. This may probably in some of these counties have been occasioned by land having been purchased from the Crown and settled upon between the two periods; but in others there is very little doubt that some mistake has been made in the county boundaries, either by the collectors of agricultural statistics, or in the returns of "lands alienated," which were furnished to this office by the Survey Department.—See Statistical Notes, Part I., 4to, p. 45.

25. Omitting the counties named in the note above, Ripon shows the largest proportion of land occupied to the quantity sold; no less than 95 per cent. of the country and suburban lands alienated in that county having been returned as occupied. Talbot comes next, showing 93 per cent.; and Normanby, not far behind, exhibits 91 per cent. The counties showing the smallest per centage of occupation, it will be observed, are Mornington, and the unnamed or unproclaimed districts, comprising—Gipps Land, Loddon, Murray, Rodney, and Wimmera; but each of these returns upwards of three-fourths of the land sold as being occupied.

Counties having the largest per centage of land occupied to the total country and suburban lands sold.

26. The county showing the largest proportion of land in cultivation to that in occupation was Dalhousie, in which 24.03 per cent., or nearly a fourth of the occupied land was cultivated; the next in order was Ripon, showing 19.87 per cent., or about a fifth of the occupied land; Talbot came next, showing 17.74 per cent.; then Villiers, showing 13.80 per cent.; Grant, 13.64 per cent.; and Bourke, showing 13.31 per cent.

Counties having the largest proportion of land in cultivation to the total in occupation.

27. The counties presenting the smallest amount of cultivation, in proportion to the land in occupation, were Hampden, having 1.64 per cent., and Follett, 1.87 per cent. only.

Counties having the least cultivation in proportion to the land in occupation.

#### NUMBER AND EXTENT OF HOLDINGS.

NUMBER AND EXTENT OF HOLDINGS.

28. During the year ending 31st March, 1860, the number of holdings was increased by 1602, being an augmentation of nearly 14 per cent. The principal increase lay in holdings under 5 acres, namely, from 786 to 1082, or nearly 38 per cent. of the class, and  $18\frac{1}{2}$  per cent. of the total increase; the number of holdings of this class, for the year under review, being precisely the same as the corresponding one for the year 1857-58. It would thus appear as if these small holdings had increased in the year ending 31st March, 1860, exactly to the extent that they decreased during the previous

Increase in number of holdings.

Holdings under one acre not now returned. Allowance therefore to be made in estimating increase.

year. It must, however, be borne in mind, that until the last two years, it was the custom for the collectors to take into account holdings under one acre, which has not been done since; so that, although we appear to be in the same position, with regard to holdings under 5 acres, as we were two years ago, there is very little doubt that they have considerably increased during that period, and that had this been allowed for, the decrease in 1858-59, would, in all probability, not have appeared. This view is borne out by the figures showing the aggregate extent of the land comprised in holdings under 5 acres for the last three years, as follows:—In 1857-58, there were 1082 holders occupying only 2233 acres, whilst in 1858-59, there were 786 holders occupying 2251 acres; and in 1859-60, the year under review, there were 1082 holders occupying no less than 3008 acres.

Average size of Farms.

29. The average size of farms for the year ending 31st March, 1860, deducting those under 5 acres and over 500 acres, was about 94 acres; and without these deductions, it was about 229 acres. During the previous year, ending 31st March, 1859, the average, after making the same deductions, was 95 acres, and without making them it was 218 acres. The year before that, ending 31st March, 1858, after making similar deductions, the average was 90 acres, and without making them it was 206 acres.\*

30. The following Table comprises the columns to be found for previous years, in Tables L. and LI. of *Statistical Notes on the Progress of Victoria*, (Part 1, pp. 47 and 48, 4to. ed.):—each item being given for the years ending 31st May, 1859 and 1860, the increase in the latter year, and the average of the two years being also shown.

NUMBER OF HOLDERS, EXTENT OF LAND OCCUPIED AND CULTIVATED, AVERAGE SIZE OF HOLDINGS, NUMBER OF ACRES CULTIVATED ON EACH, AND PROPORTION OF CULTIVATION TO OCCUPATION.—TABLE XVI.

TABLE XVI.—VICTORIA.—The number of Occupiers of purchased Land; the extent of Land in Occupation, and of that under Cultivation; the average extent of Holdings throughout the Colony; the proportionate extent of the Land in Occupation to each individual of Population; the average number of acres Cultivated by each holder; and the number of acres in Crop to every 1000 acres in Occupation, during each of the two years ending 31st March, 1859 and 1860; also the increase in 1860, and the average of the last two years.

Year ending 31st March.	Number of Occupiers of Purchased Land.	Extent of Land in Occupation.	Extent of Land under Cultivation.	Average extent of holdings throughout the Colony.	Proportionate extent of Land in Occupation to each individual of the population.	Average number of acres Cultivated by each holder.	Number of Acres in Crop to every 1000 acres in Occupation.

1860 ...	13,175	3,015,607	358,728	229	5·6	27	119
Increase in 1860 ...	1,602	496,450	59,768	11	·7	1	1
Average of two years	12,374	2,767,382	328,844	223½	5·3	26½	118½

\* See *Statistical Notes*, Part I, page 47.

31. In spite of the increased population, the average quantity of land in occupation to each individual in the colony, increased from 4·9 acres in 1859; to 5·6 acres in 1860. The average number of acres cultivated by each holder, and the proportionate number in crop to every 1000 acres in occupation, show great uniformity throughout the two years, each having increased in 1860 by one acre.

Results for 1859 and 1860 compared.

32. With respect to the class of holders cultivating most largely, the\* same rule applies as in the previous year, viz., that nearly two-thirds of the total cultivation was carried on by holders of from 50 to 350 acres; 233,141 acres out of a total cultivation of 358,728 acres having been placed under tillage by that class. The counties showing the greatest increase in the breadth of land under tillage in 1860,† were as follows : Bourke, in which the increase was 10,999 acres ; Dalhousie, in which it was 7446 acres ; Talbot, 6356 acres ; Grant, 6346 acres ; and the pastoral district of the Loddon, in which the increase was 5042 acres. In the first of these, Bourke,‡ holders of from 50 to 350 acres, cultivated 46,408 acres out of 83,028 acres, or rather more than half ; in Dalhousie the same class of holders cultivated 25,935 acres out of 34,888 acres, or over two-thirds ; in Talbot they cultivated 32,462 acres out of 44,396 acres, or nearly three-fourths ; in Grant, 41,836 acres out of 62,984 acres, or just two-thirds ; and in the Loddon, 12,970 acres out of 21,180 acres, or about four-sevenths.

Proportion of Cultivation by various classes of landholders in different counties.

### BREAD—ITS DEMAND AND SUPPLY.

33. During the year 1859 the quantity of wheat grown in Victoria was 1,564,792 bushels, and the amount returned for 1860 was 2,296,157 bushels, or an increase of 731,365 bushels upon the yield of the preceding year, and the residue of the imports over exports of wheat, flour, and bread, decreased in a corresponding proportion, i.e., from 1,954,201 bushels to 1,565,506 bushels. The number of bushels of wheat available for each individual throughout the two years was 6·80 bushels in 1859, and 7·16 in 1860 : while the proportion of wheat grown in Victoria to the total quantity of wheat, flour, and bread, available for consumption throughout each year was 44·45 per cent. in 1859, and 59·46 per cent. in 1860. This proportion of nearly three-fifths of the total quantity available for use is larger than that of any year since the period of the gold discovery (1851).§

BREAD, ITS DEMAND AND SUPPLY.  
Increased cultivation of Wheat.

TABLE XVII.—VICTORIA.—The Estimated Mean Population constantly living throughout each year ; the Quantity of Wheat grown available for each year's consumption ; the Excess of Imports over Exports of Wheat, Flour, and Bread ; and the Total Residue of Wheat grown and imported, and of Imports of Flour and Bread available for consumption during each year, after deducting Exports of the same articles ; also the number of Bushels of Wheat available for each Individual living in the Colony ; and the Proportions per cent. of Wheat grown, to the Total Quantity of Wheat, Flour, and Bread available for consumption throughout the years 1859 and 1860, together with the increase or decrease of each item in the latter year :—

‡ Summary Table VII., page 7 post.

§ See Statistical Notes, Part I, Table LII., p 50.

Quantity of wheat available for the consumption of each individual in Victoria in 1860 compared with previous years.

34. The quantity of wheat available for the consumption of each individual of the population during the year 1860 (7·16 bushels) was somewhat greater than that available for the same purpose during each of the two previous years (1853 and 1859), in neither of which did it come up to 7 bushels per head, but in the two years preceding those (1856 and 1857), the quantity amounted to nearly 9 bushels per head. In all these cases however, the Chinese were included in the first instance in the total population, and the same quantity of bread was allowed for a Chinaman, to whom rice is the staff of life, as for one of the other colonists, who uses much less rice and very much more bread. These facts and the proper corrections were pointed out in the *Statistical Notes*, Part I.,† and to follow out the process there indicated, it becomes necessary to form an estimate of the mean number of Chinese in the colony throughout 1860, which has been arrived at as follows.

Mean Chinese population how arrived at.

35. On the 31st December, 1859, the number of resident Chinese was estimated at 43,385, but in this estimate no allowance was made for deaths, which since the census of 1857, probably amounted up to that period to 1500; these being deducted, would leave 41,885 as the number of Chinese in the colony at the beginning of 1860. During 1860\* it is estimated that 500 more deaths occurred, and the excess of the departures over the arrivals of Chinese during the year was recorded at 3204, which together would reduce the number in the colony to 38,181. It is, however, also estimated that about 11,000 Chinese, of whom no official cognizance was taken, migrated over the border to New South Wales, thereby reducing the number in the colony, at the end of 1860, to 27,181, the mean between which and 41,885, the estimated number resident at the beginning of the year, would give 34,533, or in round numbers, 35,000, as the mean number of Chinese living in Victoria throughout the year.

Mean population of Victoria exclusive of Chinese, and number of bushels of wheat to each individual, 1860.

36. This estimate of the mean Chinese population being deducted from the total mean population of the colony (539,337), leaves 504,337 as the mean population exclusive of Chinese, and by using this number as a divisor the following result is obtained :—

Mean population  
exclusive of Chinese.

504,337

...

...

...

Number of bushels of  
wheat available to  
each individual.

7·66

Comparison of wheat consumption by Caucasians in 1857, 1858, and 1859.

37. In the same manner the quantity of wheat available for each individual of the Caucasian or greater bread-consuming portion of the population was, shown by the *Statistical Notes*, Part I.,† to have been 7·40 bushels in 1859, 7·38 bushels in 1858, and 9·54 bushels in 1857. A remarkable uniformity is thus apparent in the results of the last three years.

Rice consumed by Europeans per head.

38. The number of pounds of rice per head available for the consumption of the Chinese in the colony during the year 1860, is arrived at in the following Table, after the deduction of 6·3 lbs. per head (for the European population) from the total excess of imports over exports, as the probable consumption of rice by that portion of the community. This quantity was the estimated individual average for each of the five years prior to the influx of the Chinese in 1853, and was made the basis of similar calculations in Table LIII. of the *Statistical Notes*, Part I.‡

\* The total number of deaths of Chinese registered in the four years, 1857-1860, amounted to 1551; there is, however, very little doubt that, owing to this people's ignorance of our laws, and from other causes, a considerable number escaped registration during that period, and that the Chinese deaths which actually occurred during the four years, did not fall short of 2000, which is the estimate here given.

† See *Statistical Notes*, Part I., page 51.

‡ See *Statistical Notes*, Part I., page 52.

TABLE XVIII.—VICTORIA.—The estimated mean number of Chinese in the colony; the excess of Imports and Exports of Rice; the quantity of Rice required for the consumption of the European and other colonists, exclusive of the Chinese; the residue of Rice available for each individual Chinese in the colony throughout the year 1860.

RICE AVAILABLE FOR THE CONSUMPTION OF CAUCASIANS AND CHINESE.—TABLE XVIII.

Estimated mean number of Chinese in the Colony throughout the year 1860.	Excess of Imports over Exports of Rice during the year.	Quantity of Rice required for the consumption of European and other colonists, exclusive of Chinese, throughout the year.	Residue of Rice left for consumption of the Chinese throughout the year.	Number of pounds of Rice available for each Chinese in the colony throughout the year.
35,000	lbs. 20,148,016	lbs. 3,177,323	lbs. 16,970,693	lbs. 484·87

39. The quantity of rice available for the daily consumption of the Chinese was, for the year under review, 1·32 lbs. per man, which is just 1 lb. less than in the previous year (1859), during which 2·32 lbs. on the average, were available for the daily supply of each individual Chinese; this quantity was, however, in all probability, in excess of actual requirements, as 1·14 lbs per head was a quantity sufficient for 1858, and 1·72 lbs for 1857.

Quantity of rice available for every Chinese daily.

### NATURE OF THE CROPS.

NATURE OF THE CROPS.

40. With the view of ascertaining what description of produce is raised by each class of landholders, three new Tables have this year been added,\* showing the area placed under cereal crops, green crops, and hay, by each class of holders. The largest extent of land, cropped with cereals, (59,564 acres), was in the possession of holders of from 100 acres to 200 acres; the next largest amount (40,996 acres), of holders of from 200 acres to 350 acres, whilst 40,479 acres belonged to holders of from 50 to 100 acres; and 27,286 acres, to those of 500 acres and upwards. Of green crops, 10,693 acres were raised by holders of from 100 to 200 acres; 7706 acres, by holders of from 50 acres to 100 acres; 7117 acres, by holders of from 200 acres to 350 acres; and 5342 acres, by holders of 500 acres and upwards. Of hay, 23,262 acres, were grown by holders of from 100 to 200 acres; 19,178 acres, by holders of from 50 to 100 acres; 16,751 acres, by holders of from 200 acres to 350 acres; and 15,496 acres, by holders of 500 acres and upwards. These, and other results, are arranged in the following Table:—

New tables framed to show the kind and extent of crops cultivated by small and large landholders.

TABLE XIX.—VICTORIA.—The extent of land placed under Cereal Crops, Green Crops, and Hay, by each class of holders, with the proportions per cent. that the area under each of those crops in the possession of each class of holders bore to the total area under each crop:—

PRINCIPAL CROPS TABLE  
XX.

Principal crops grown in  
1859 and 1860 compared.

Proportion of each crop to  
the total cultivation and  
average produce of each.

Minor crops. Comparisons  
of acreage and produce.  
TABLE XXI.

41. The annexed Table (XX) shows the manner in which the land under cultivation has been devoted to each of the principal crops. The gross produce of those crops, the proportion that each bore to the total cultivation, and the average produce of each are also shown for the two years 1858-59, and 1859-60, so that any increase or decrease may be easily observed. Thus in respect to wheat, oats, and hay, an increase will be found both in the acreage under crop and the quantity of produce raised. In the case of wheat this has resulted to the extent of about 29,000 acres ( $28,858\frac{1}{2}$ ) or nearly three quarters of a million ( $731,364\frac{1}{2}$ ) bushels. In the case of oats it has occurred to the extent of 12,641 acres or 393,279 bushels, and in the case of hay to the extent of 12,408 acres or 22,101 tons. The area under green forage also increased to the extent of nearly 3000 acres, and the increase under minor crops was to the extent of 6544 acres, the details of which are given in Table XXI. As regards barley and potatoes a decrease is observable, in the case of the former to the extent of 1220 acres or 15,506 bushels, and in that of the latter to the extent of 2404 acres, or a falling off in the quantity produced of no less than 59,500 tons.

42. With reference to the proportion of the relative crops to the total cultivation, wheat increased from 26.2 to 29.8 per cent., and it is satisfactory to note that its average produce appears also to have increased from 20 bushels to 21.4 bushels, or an augmented production of nearly a bushel and a half per acre. The per centage to the total of the acreage under oats, slightly declined, but a small increase of about half a bushel per acre ( $28.3$  bushels against  $27.9$  bushels) took place in the average produce. The acreage under barley also slightly diminished in its proportion to the total, but an increase in produce from 21.7 to 24 bushels per acre, or of about two and a third bushels took place in favor of 1859-60. The acreage under potatoes fell off to the extent of 2.3 per cent. of the total, and the average produce also declined one half, or from 3.6 tons to 1.8 tons per acre. The ratio to the total of the acreage under hay fell off to the extent of 1.4 per cent., whilst its average produce per acre remained at 1.4 tons. A fractional increase (.4 per cent.) took place in the proportion to the total of the acreage under green crops, and an increase of 1.1 per cent. in that proportion occurred in the number of acres under minor crops.

43. With reference to the minor crops, which, with the gardens, orchards, and land in fallow, make up the total cultivation exclusive of the more important crops given in Table XX., full details for the years 1858-59, and 1859-60, will be found in Table XXI, by which it appears that an increase of 258 acres has taken place in the extent of land under maize, but a falling off from 20.2 to 10 bushels per acre or upwards of one-half has occurred in the production. This may be partly attributable to a portion of the crop having been used as green forage, and not returned as such, by the farmers. In regard to sorghum, peas, beans and millet, the acreage under which increased by 130 acres, or about a third, there appears a decrease in the produce to the extent of 4 bushels per acre, which, also, may have resulted from the use, as green stuff, of some part of the first and last of those crops. With regard to rye and bere, mangel-wurzel, beet and cabbage, all these crops show an increase in the acreage, and in the produce both gross and average: carrots and parsnips also show an increase in the number of acres and the gross produce, but a falling off in the acreable produce to the extent of 1.4 tons. The only crops exhibiting a falling off both in acreage and produce are turnips and tobacco, but the number of acres under each has always been too small to enable a fair average of their productiveness to be ascertained. The quantity of onions produced has apparently diminished, but it is well known that this crop is principally grown in gardens, of which the produce is not noted, but which, taken with orchards, increased in collective area to the extent of upwards of 300 acres. The number of acres of land in fallow nearly doubled in 1859-60 as compared with the former year.

44. The culture of the vine is steadily and rapidly increasing. In the year under review the number of acres of vineyards augmented from 547½ to 811, or about 48 per cent., and the number of vines in about the same ratio. The quantity of wine manufactured increased from 7740 galls. to 13,966 galls., or about 82 per cent.; and that of brandy from 72 to 150 galls., or about 108 per cent. The quantity of grapes sold also increased by 894 cwt., being an augmentation of 25 per cent. It must be remarked, however, that all the figures respecting vines must be received with some degree of caution, as a confusion has sometimes been made in the returns between the crops of the year in which the collection is made and those of the year preceding it, in consequence of the instructions contained in the latter part of clause 1 in my "Circular Letter to Collectors of Agricultural Statistics"\* not being generally observed. This inattention would cause the returns for some parts of the colony to be given for one year, and in other parts for another. There is very little doubt, however, that the figures given are rather under than over the mark.

Vine Culture.

Wine and brandy manufactured.

Grapes sold.

Instructions to collectors of agricultural statistics not generally observed as regards returns of vine culture.

## LAND TENURE.

LAND TENURE.

45. It was stated in "*Statistical Notes*," Part I,† that the Collectors of Agricultural Statistics for 1860 had been instructed to obtain information of the kind of tenure under which each farmer held his land, with a view to ascertain the quantity held and cultivated by tenant farmers and by those occupying their own freeholds. This attempt was to a great extent successful—inasmuch as only 1410 farm holdings, besides 535 others connected with with squatting stations, making in all 1945 holdings out of 13,175, were returned as "unspecified" as to tenure. With reference to the purchased land in connection with runs, it is understood that only a very small proportion of it is held under lease, and therefore that no great error would have been made by adding it to the freehold land. As, however, it is interesting for many purposes to distinguish the land held by farmers from that occupied by squatters, it has been preferred to keep the one separate from the other, thus dividing the land (exclusive of that "unspecified" as to tenure) into three classes, viz., "Freehold," "Leasehold," and "Connected with Runs." On this subject very elaborate Tables‡ have been introduced, which not only show the classification of the holdings under the different modes of tenure in each County and Pastoral District, but also the number of acres in each County and District cultivated by freeholders, leaseholders, and stationholders, with each of the principal crops.

Attempts to obtain information as to tenure.

Various kinds of tenure.

TABLE XXII.—VICTORIA.—The NUMBER of HOLDERS, and the NUMBER of ACRES of LAND OCCUPIED and CULTIVATED; whether held in FREEHOLD, LEASEHOLD, or connected with SQUATTING RUNS; and the proportions per cent. that each bore to the total quantity specified on the 31st March, 1860.

LAND OCCUPIED AND CULTIVATED BY FREEHOLDERS, LEASEHOLDERS, AND SQUATTERS. TABLE XXII.

DESCRIPTION OF TENURE.	OCCUPIERS.		LAND IN OCCUPATION.		LAND IN CULTIVATION.	
	Number.	Proportion per cent. to the total Specified.	Number of Acres.	Proportion per cent. to the total Specified.	Number of Acres.	Proportion per cent. to the total Specified.
Freehold ... ..	8,439	71·7	1,144,083¼	39·4	219,597½	66·4
Leasehold ... ..	2,791	23·7	475,424¾	16·4	92,861½	28·1
Connected with Squatting Runs ... ..	535	4·6	1,285,394	44·2	18,346½	5·5
Total { Specified ...	11,765	100·0	2,904,902	100·0	330,805½	100·0
{ Unspecified	1,410	...	110,705¼	...	27,922½	...
GRAND TOTAL ...	13,175	...	3,015,607¼	...	358,727¾	...

NOTE.—It is believed that, except in a few instances, the land held in connection with squatting runs is freehold.

\* Appendix to *Statistical Notes*, Part I, p. 82.

† See Appendix to *Statistical Notes*, foot note to page 61.

‡ See Summary Tables XV. to XXXV., p.p. 11 to 31, *post*.

46. The above Table (XXII) shows the number of holders of land under each description of tenure, the number of acres held, and the number cultivated by each, with the proportion per cent. of each item to the total quantity specified under the same head.

Occupiers of freehold and leasehold jointly set down as freeholders, &c.

47. The occupiers of both freehold and leasehold land in one holding are set down in the above Table as freeholders, and the land cultivated by that class is set down as freehold ; but 15,611 acres held by them under lease has been added to the leasehold land in occupation ; the extent of land held by exclusively tenant farmers amounting only to 459,813 $\frac{3}{4}$ .

Relative proportions of holders under the different kinds of tenure.

48. It is thus found, that of the total quantity specified, which may probably be considered as a fair average for the colony, the freehold farmers were in the proportion of nearly 72 per cent., and the squatter landholders, who may also be considered as freeholders, at less than 5 per cent., making together about 76 per cent. ; the balance of 24 per cent., or not a fourth, being leaseholders. With reference to the land in occupation, that connected with squatting runs bore to the total specified the largest proportion, or about 44 per cent., the freehold farmers coming next, having over 39 per cent., together with the squatting holders occupying nearly 84 per cent., or about five-sixths, the remaining sixth, or 16·4 per cent., being in the occupation of the leaseholders. Reviewing the land in cultivation the proportions again change, the freehold farmers cultivating 66·4 per cent. of the total specified ; the leaseholders next, cultivating 28·1 per cent. ; and the occupiers of stations holding purchased land, cultivating only 5 $\frac{1}{2}$  per cent., or collectively with the freehold farmers, cultivating 72 per cent. of the total quantity specified.

MISCELLANEOUS RETURNS.

MISCELLANEOUS RETURNS.

Poultry kept, stock slaughtered, milk obtained, butter and cheese made, and number of acres reaped by machinery.

49. The collectors of agricultural statistics for the year under review were also instructed to make an endeavor to obtain returns of the number of poultry kept on farms and stations ; the aggregate weight of stock slaughtered by farmers and squatters for home consumption ; the quantity of milk, butter, and cheese, obtained and manufactured ; and the number of acres of crop reaped by machinery. This attempt being new, both to the collectors and to those from whom the information was sought, was only partially successful. For what they are worth, however, the figures are given in Summary Table XXXVIII,\* and the totals are appended in the following Table.

NUMBER OF POULTRY, WEIGHT OF STOCK SLAUGHTERED FOR HOME CONSUMPTION. MILK, BUTTER, AND CHEESE OBTAINED AND MADE, AND EXTENT OF LAND REAPED BY MACHINERY, 1859-1860. TABLE XXIII.

TABLE XXIII.—VICTORIA.—The number of Poultry of all kinds; the weight of Stock slaughtered for home consumption; the quantity of Milk obtained, of Butter and Cheese manufactured; and the number of Acres of crop reaped by machinery on farms and stations, during the year ending 31st March, 1860.

Poultry of all kinds.	Stock Slaughtered for home consumption.	Milk obtained.	Butter made.	Cheese made.	Extent of Land reaped by Machinery.
number.	cwt.	gallons.	lbs.	lbs.	acres.
402,821	126,053	5,258,493	1,434,902	79,491	14,270

NOTE.—The numbers of poultry kept, the stock slaughtered, and the milk, butter, and cheese obtained and made in towns and villages, by occupiers of allotments of purchased land of smaller extent than one acre, and by Squatters having no purchased land connected with their stations, are not included in the above return.

GOLD PRODUCE.

GOLD PRODUCE.

50. An attempt was made in *Statistical Notes*, Part I, to arrive at the total produce of the Victorian Gold Fields from the year of their discovery, 1851. That attempt is now followed up in Table XXIV.

\* See Page 34, post.

TABLE XXIV.—VICTORIA.—The Quantity of Gold Exported, exclusive of that taken from the Colony by private hand, during the year 1860, prior to that year, and from the commencement of the gold discoveries up to the end of that year; its value by Customs returns, and at 80s. per oz.

GOLD EXPORTED BEFORE AND DURING 1860, QUANTITY AND VALUE, TABLE XXIV.

Period.			Gold Exported from Victoria which passed through the Customs, and exclusive of that which was taken from the Colony by private hand.*			
			Quantity.		Value.	
					Per Customs Returns.	At £4 per ounce.†
			oz.	dwts. gr.	£	£
Year 1860 ...	...	...	2,156,660	12 0	8,624,860	8,626,642
Prior to 1860 ...	...	...	21,761,319	10 8	84,296,158	87,045,276
Grand Total ...	...	...	†23,917,980	2 8	92,921,018	95,671,918

\* There is very little doubt that a considerable quantity of gold has, from time to time, been taken from the colony by private hand, in order to evade the export duty of 2s. 6d. per ounce, which came into operation in May, 1855. By the estimate of one of the Melbourne gold brokers (See "Statistical Notes," Part I., Note 5 to Table LX., page 58), that quantity, up to the end of 1859, amounted to 1,691,234 oz., and supposing that estimate to be correct and to be brought on by proportion to the end of 1860, the quantity of unrecorded gold exported from the colony would amount up to that date to 1,728,817 oz., which, added to the quantity which passed through the Customs, would give a total of 25,646,797 oz., amounting, at 80s. per ounce, to a value of £102,587,188.  
† This return is exclusive not only of the gold taken from the colony by private hand, but also of that lying in the Treasury, gold offices, and banks at the end of 1860. It therefore does not represent the total produce of the Victorian gold fields, but only as much of it as passed through the Customs up to that period.  
‡ The Customs rates of valuation have varied at different periods from 70s. to 75s. and 80s. per ounce.—(See "Statistical Notes," Part I., Note 6 to Table LX., page 58.) For the sake of comparison, the value has been brought out in this column at the rate of £4 an ounce.

51. Since the year 1856 a gradual falling off has taken place in the exports of gold, the quantity passing through the Customs having in 1857 been 224,167 oz. 9 dwts. less than in the former year; in 1858, 233,340 oz. 8 dwts. 12 gr. less than in 1857; and in 1859, 247,512 oz. 6 dwts. 12 gr. less than in 1858. This decrease in the exports is also apparent in 1860, but only to about half the extent of the falling off in the previous year, the deficiency as compared with it amounting only to 124,015 oz. 1 dwt. This is the more satisfactory, as the miners both Europeans and Chinese diminished in numbers during that year, as will be seen by the following table, which sets forth the number of persons of both those races occupied in gold mining on the 31st December of the two years 1859 and 1860, and also distinguishes those employed in quartz mining from those occupied in alluvial mining.

Gradual falling off in gold exports since 1856.

Diminution in numbers of European and Chinese miners.

TABLE XXV.—VICTORIA.—The NUMBER of GOLD MINERS, whether Europeans or Chinese, and whether employed in Quartz or Alluvial Mining, on the 31st of December of each of the two years 1859 and 1860; also the increase or decrease of either race or class at the latter period.

NUMBER OF GOLD-MINERS, EUROPEAN AND CHINESE, WHETHER EMPLOYED IN QUARTZ OR ALLUVIAL MINING, 1859 AND 1860. —TABLE XXV.

DATE.	QUARTZ MINERS.			ALLUVIAL MINERS.			TOTAL.		
	Europeans.	Chinese.	Total.	Europeans.	Chinese.	Total.	Europeans.	Chinese.	Total.
31st Decr., 1859	15,342	24	15,366	85,249	25,149	110,398	100,591	25,173	125,764
31st Decr., 1860	18,268	28	18,296	69,724	20,542	90,266	87,992	20,570	108,562
Increase ...	2,926	4	2,930	...	...	...	...	...	...
Decrease ...	...	...	...	15,525	4,607	20,132	12,599	4,603	17,202

NOTE.—For the purpose of this return all races except the Chinese are considered as Europeans.

52. By the above Table, which was compiled, as far as regards the year 1859, from the Report of the Board of Science, and for 1860 from a return furnished by the Honorable the Commissioner of Mines, it is observed, that

Results compared.

while miners generally decreased by 17,202, or nearly a seventh, the number of quartz miners was augmented to the extent of 2930, or by about a fifth; so that the diminution in the number of alluvial miners amounted to no less than 20,132, or about 18 per cent. The Chinese appear still to engage only to a very small extent in quartz mining, no more than 28 being returned as following that occupation in 1860, against 24 at the end of 1859.

53. During the year under review, the steam engines employed in both descriptions of mining considerably increased both in numbers and horse-power, as will be seen by the following Table:—

TABLE XXVI.—VICTORIA.—The NUMBER of STEAM ENGINES, and their aggregate HORSE-POWER, whether employed in Quartz or Alluvial Mining, on the 31st December of the two years 1859 and 1860, and the increase at the latter period.

DATE.	QUARTZ MINING.		ALLUVIAL MINING.		TOTAL.	
	No. of Steam Engines.	Aggregate Horse-power.	No. of Steam Engines.	Aggregate Horse-power.	No. of Steam Engines.	Aggregate Horse-power.
31st December, 1859 ...	296	4,357½	285	3,821	581	8,178½
31st December, 1860 ...	417	6,645	294	4,137	711	10,782
Increase in 1860 ...	121	2,287½	9	316	130	2,603½

54. It thus appears that the greatest increase took place in the engines used in quartz mining, the returns showing an addition of 121 steam engines, and of an augmented power equal to 2287½ horses under that head, against 9 additional steam engines, and an increase of 316 to the horse-power under the head of alluvial mining; the total number of steam engines having increased by 130, and the aggregate horse-power by 2603½.

55. The total number of steam engines employed in mining operations being 711, and their aggregate horse-power 10,782, the average at the end of 1860 was rather more than 15 horse-power to the steam engine, against an average of 14 horse-power to the engine at the end of 1859.

56. The approximate value of mining plant on the gold fields for the two years was as follows, showing an increase of £143,380 for the latter year:—

31st December, 1859 ...	£ 1,155,923
„ 1860 ...	1,299,303
Increase in 1860 ...	£ 143,380

57. The numbers of each of the different descriptions of mining plant are given in the following Table for the two years 1859 and 1860; by comparing which it will be found that a large increase has taken place in almost every kind of machine in use upon the gold fields.

TABLE XXVII.—VICTORIA.—The numbers of each Description of Plant (exclusive of steam engines) used upon the Gold fields, in both Quartz and Alluvial Mining, on the 31st of December of each of the two years 1859 and 1860.

Description of Plant.	Quartz Mining.		Alluvial Mining.		Total.	
	1859.	1860.	1859.	1860.	1859.	1860.
Horse puddling machines ...	...	...	3982	3958	3982	3958
Whims and pulleys ...	69	161	396	354	465	515
Whips ...	4	26	113	134	117	160
Horse pumps ...	...	1	19	37	19	38
Sluices and toms ...	...	...	168	623	168	623
Water wheels ...	...	5	101	138	101	143
Hydraulic hoses ...	...	...	...	19	...	19
Water and horse-power crushing machines ...	15	41	...	...	15	41
Hand machines ...	...	...	3	...	3	...
Pumps worked by water power ...	...	...	8	...	8	...
Windmill ...	1	...	...	...	1	...

58. I have now completed, to the end of 1860, my first series of contributions to the Statistical History of Victoria from its foundation. The procurement of authentic data from all sources, public and private, and their subsequent arrangement, condensation, and fitting to a frame-work of notes like these, took place amidst many interruptions incident to various and arduous routine duties, over a period of upwards of eight years. The manner, however, in which the first part of my work has been received by the Government, the press, and the public of this country, as well as by statisticians and journalists in Europe, encourages me to pursue, with unabated zeal, the path I have marked out for further statistical enquiries of a kindred character, in relation to the growth and progress of the young people which it is my duty and pride to serve; a people whose past is so fraught with enduring interest, that its published records have already placed it in the estimation of the political and social economist, in the first rank of statistical states. Conclusion.

I have the honor to be,

Sir,

Your obedient Servant,

WILLIAM HENRY ARCHER,

Registrar-General.

---

NOTE.—The figures both in the Report and Summary Tables have been supervised and mutually checked by several gentlemen on the staff of this Department. If, notwithstanding all the pains taken to ensure accuracy, errors of moment should at any time be discovered, I shall be glad to have them pointed out, and to take the earliest possible opportunity of acknowledging the source of rectification—W. H. A.

ERRATA TO STATISTICAL NOTES, PART I., FIRST SERIES. (*Quarto Edition.*)

\* For a vineyard of 50 acres no precise return of the number of plants has been obtained, but they consist for the greater part of cuttings recently planted. The vines and cuttings are computed at 130,000, which added to the total for the Colony, given above, brings the latter up to 2,026,939.

VINES.—An effort was made to obtain returns of the number of vines of different ages, but without success—very few vinegrowers having supplied the information. An approximate, however, may be attained after a few years by deducting the number existing at previous periods from the latest return. For example, taking the number in 1860 at 2,026,939 (see foregoing note), and deducting from it the number on the returns for 1859, namely, 993,602, it appears that the number under one year (that is, planted within the previous twelve months), exclusive of failures replaced, was 1,033,337.

## VICTORIA.—INCREASE OF TILLAGE.

TABLE III.—Showing the Increase of Land in Cultivation in each County and Pastoral District of Victoria in the Year ending 31st March, 1860, as compared with the previous Year.

COUNTIES AND DISTRICTS.					EXTENT OF LAND UNDER CROP.		INCREASE.	
					1859.	1860.	In extent.	Per cent.
Anglesey	...	...	...	...	2,150	1,312 $\frac{3}{4}$	*	
Bourke	...	...	...	...	72,029	83,028 $\frac{1}{2}$	10,999 $\frac{1}{2}$	15·3
Dalhousie	...	...	...	...	27,442	34,888 $\frac{1}{4}$	7,446 $\frac{1}{4}$	27·1
Dundas	...	...	...	...	1,598 $\frac{1}{2}$	1,593	Decrease	Decrease
Evelyn	...	...	...	...	4,475 $\frac{1}{2}$	5,821	1,345 $\frac{1}{2}$	30·1
Follett	...	...	...	...	91	161 $\frac{1}{2}$	70 $\frac{1}{2}$	76·9
Grant ...	...	...	...	...	56,638 $\frac{1}{4}$	62,984 $\frac{1}{2}$	6,346 $\frac{1}{4}$	11·2

Hampden	...	...	...	...	1,847 $\frac{1}{4}$	2,516	668 $\frac{3}{4}$	36·2
Heytesbury	...	...	...	...	2,151 $\frac{3}{4}$	2,785 $\frac{1}{2}$	633 $\frac{3}{4}$	29·5
Mornington	...	...	...	...	4,769 $\frac{1}{2}$	7,959 $\frac{1}{4}$	3,189 $\frac{3}{4}$	66·9
Normanby	...	...	...	...	4,932 $\frac{1}{4}$	6,033 $\frac{1}{2}$	1,100 $\frac{1}{2}$	22·3
Polwarth	...	...	...	...	3,875	4,759 $\frac{1}{2}$	884 $\frac{1}{2}$	22·8
Ripon ...	...	...	...	...	14,447	18,616 $\frac{1}{4}$	4,169 $\frac{1}{4}$	28·9
Talbot	...	...	...	...	38,040 $\frac{1}{2}$	44,396 $\frac{1}{4}$	6,355 $\frac{3}{4}$	16·7
Villiers	...	...	...	...	26,738 $\frac{3}{4}$	29,154	2,415 $\frac{1}{4}$	9·0
Gipps Land	...	...	...	...	3,532 $\frac{1}{4}$	4,172 $\frac{1}{2}$	639 $\frac{1}{2}$	18·1
The Loddon	...	...	...	...	16,138 $\frac{1}{2}$	21,180 $\frac{1}{4}$	5,041 $\frac{3}{4}$	31·2
Rodney	...	...	...	...	1,781 $\frac{1}{2}$	2,159	377 $\frac{1}{2}$	21·2
The Murray	...	...	...	...	9,801 $\frac{1}{2}$	14,345 $\frac{1}{2}$	4,544	46·4
The Wimmera	...	...	...	...	788 $\frac{3}{4}$	1,212	423 $\frac{1}{4}$	53·6

\* The decrease in this County is more apparent than real; the collector for the previous year having mistaken the boundary between Anglesey and Dalhousie, near Seymour, and placed in the returns for the one County a number of holdings situated in the other. As the collector for this year has had the advantage of a map superior to anything before obtainable, his returns are more to be relied on as regards boundaries, than those of his predecessors. It follows as a consequence of this error that the increase given for Dalhousie last year, was overstated, and is this year understated by about 900 acres, and the increase for two years in the case of each County, that is comparing 1860 with 1858, will be free from the consequences of this mistake.

## VICTORIA.—AVERAGE PRODUCE.

TABLE IV.—Showing the Average Produce per Acre of the principal Crops in each County and Pastoral District of Victoria for the Year ending 31st March, 1860, and the Average of the whole Country for each of the last five years, 1856–1860, both included.

## VICTORIA.—CLASSIFICATION OF HOLDINGS—2.

TABLE VIII.—Showing the Average Size of Holdings of each class; the average acreage cultivated by each class of holders; the proportion, as compared with the totals for the Colony, held and cultivated by each class; the proportion of their holdings placed under cultivation by each class, as well as the proportion of their cultivated land placed under Cereal Crops, Green Crops, and Hay, respectively, by each class of holders.

CLASSIFICATION OF HOLDINGS IN STATUTE ACRES.	Average size of Holdings of each class.	Average area cul- tivated by each class of Land- holders.	Proportion of Land held by each class as com- pared with the total area in occupation.	Proportion of Land cultivated by each class as compared with the total quan- tity under cultivation.	Proportion of Land cultivated by each class as compared with the total quantity held by each class.	Proportion of Land placed un- der Cereal Crops by each class as com- pared with the total quantity placed under cul- tivation by each class.	Proportion of Land placed un- der Green Crops by each class as com- pared with the total quantity placed under cul- tivation by each class.	Proportion of Land placed under Hay by each class as compared with the total quan- tity placed under cul- tivation by each class.

NOTE.—This Table includes all Holdings whether Freehold, Leasehold, or unspecified as to tenure, which have not been returned in connection with Runs, and is designed to show the quantity of land held and its employment by Agriculturalists as distinguished from that purchased mainly for Pastoral use. It is however to be observed that some of the largest Grazing Holdings in the Colony are included in the last class (500 acres and upwards) by reason of their being unconnected with Runs.

VICTORIA.—CLASSIFICATION OF HOLDINGS—10.

TABLE XVI.—Showing the relative proportion of Land held, cultivated, and placed under different Crops by Freeholders, Leaseholders, and Station Holders respectively.

DESCRIPTION OF HOLDING.	Number of Holders.	ACREAGE.						PROPORTIONS.						
		Extent of Holdings.	Area under Cultivation.	Area under Cereal Crops.	Area under Green Crops.	Area under Hay.	Area under Other Crops.	Proportion held by each description of Holders as compared with the total of all Holdings.	Proportion of each description of Holdings cultivated as compared with their area.	PROPORTIONS PLACED UNDER—				
										All Crops.	Cereal Crops.	Green Crops.	Hay.	Other Crops.
		acres.	acres.	acres.	acres.	acres.	acres.	acres per cent.	acres per cent.		acres in a thousand.	acres in a thousand.	acres in a thousand.	acres in a thousand.
Tenure { Freehold ...	8,439	*1,159,694¼	219,597½	127,092	24,625¾	58,419	9,460½	38·5	18·9	1,000	·579	·112	·266	·43
Leasehold ...	2,791	459,813¾	92,861½	54,583¾	9,356¼	24,635¾	4,285¾	15·2	20·2	1,000	·588	·101	·265	·46
Unspecified ...	1,410	110,705¼	27,922½	13,168½	4,335½	8,314¼	2,104¼	3·7	25·2	1,000	·472	·155	·298	·75
Held in connection with Runs ...	535	†1,285,394	18,346½	7,799½	1,428¾	7,201½	1,916¾	42·6	1·4	1,000	·425	·78	·393	·104
Total ...	13,175	3,015,607¼	358,727¾	202,643¾	39,746½	98,570½	17,767¼	100·0	11·9	1,000	·565	·111	·275	·49

\* This Number includes 15,611 acres of leased land which form a portion of the holdings of freeholders, being worked in connection with the freehold land.  
† It may be observed with respect to the quantity of land shown in these Returns as being held in connection with Runs that it is necessarily less than that given in the Assessment Returns, as such parts of the purchased portions of Runs as are leased to tenants for agricultural use appear of course in the names of the occupiers, and not in those of the landlords. Very little of the land held in connection with Runs appears to be held under lease.

# VICTORIA.—CLASSIFICATION OF HOLDINGS—11.

TABLE XVII.—Showing in Classified Arrangement the Number of Holders, Extent and Cultivation of Holdings of Alienated Land in each County and District, distinguishing the Freehold from the Leasehold Land unconnected with Runs, and exhibiting the Quantity of Land in connection with Runs.

\*\* The difference between the sum of the figures in the respective columns in each subdivision (Freehold, Leasehold, and Stations) and those in the corresponding columns containing the Total of County, is formed by the unspecified as regards the tenure of the land or its connection with Stations.

## LIVE STOCK—1.

## GENERAL SUMMARY.

TABLE XXXVI.—Showing the Number of Live Stock in Victoria in the month of March, 1860, distinguishing the quantity on Alienated Land from that on Crown Land; and exhibiting the Stock on Stations, inclusive of Alienated Land connected therewith, as well as the Stock on Alienated Land, exclusive of that connected with Stations.

DESCRIPTION OF LAND.	DESCRIPTION OF STOCK.			
	Horses.	Cattle.	Pigs.	Sheep.
Alienated Land... ..	52,101	295,689	50,965	674,897
Crown Land ... ..	17,187	387,845	...	5,119,230
Alienated Land, unconnected with Stations ...	42,874	188,244	46,788	167,311
Crown and Alienated Land, connected with Stations	26,414	495,290	4,177	5,626,816
Total of Colony ... ..	69,288	683,534	50,965	5,794,127

NOTE.—With reference to the number of Pigs, it should be observed that, owing to no assessment being levied on that description of Stock, no return is required or furnished of the quantity on the stations of those holding Crown land only, although there is, doubtless, a considerable number on them. It may also be noticed that the Assessment Returns are made for a period some weeks earlier than that for which the Agricultural Statistics are taken.

LIVE STOCK—2. SUMMARY OF VICTORIA—COUNTIES AND DISTRICTS.

TABLE XXXVII.—Showing the Number of Holders and Quantity of Live Stock held on the 31st March, 1860, on Land alienated from the Crown, distinguishing Land unconnected with Stations from that connected with Stations.

COUNTIES  AND  DISTRICTS.			ALIENATED LAND BOTH CONNECTED AND UNCONNECTED WITH STATIONS.						ALIENATED LAND UNCONNECTED WITH STATIONS.					ALIENATED LAND CONNECTED WITH STATIONS.

Poultry.—It is to be recollected that the numbers of poultry shown in this abstract are only those belonging to the 13,175 agriculturists in the occupation of holdings of purchased land exceeding one acre, and that the very large number belonging to householders in towns, villages, and suburban districts, as well as those of persons occupying Crown lands, only are excluded. The same observation is applicable to "Stock Slaughtered," and to the returns of Dairy Produce.

Milk, Butter, and Cheese.—This first attempt to obtain an account of dairy produce has proved a comparative failure, though it is possible, if continued annually, that the farmers may be induced to pay such attention to the matter as would enable them to furnish sufficiently close approximations. Out of the 58,154 milch cows entered on the Schedules (See preceding Table, No. 37), no return has been made by the owners of 19,334, and in a very large number of instances the estimates rendered have been given with doubt and hesitation. It would seem, however, that the omissions are for the greater part made up of cows held for domestic supplies; and there is no reason to infer, where the produce of the dairy has been sold off the farm, that the farmers were unable to give close approximations, so far as the butter and cheese are concerned, more especially as regards the latter, as may be gathered from the greater precision in the entries on the schedules. The omitted milch cows are distributed as follows:—Anglesey, 76; Bourke, 8,215; Dalhousie, 346; Dundas, 118; Evelyn, 799; Follett, 34; Grant, 2,333; Grenville, 1,151; Heytesbury, 10; Mornington, 976; Normanby, 683; Polwarth, 181; Ripon, 69; Talbot, 911; Villiers, 390; Gipps Land, 175; The Loddon, 450; Rodney, 113; The Murray, 2,120; The Wimmera, 184. It is also to be remarked that there are instances (stations) of returns being given of dairy produce, and no return made of milch cows, by reason, apparently, of their not running on purchased land.

NOTE.—The instances of light Corn crops are generally attributed to drought. Late sowing is also mentioned in connection with the deficiency of moisture. Altogether the complaints respecting the Cereal crops are not numerous, and in some cases neglect is acknowledged, as well as exhaustion of the soil from the system of constant cropping without manure. In South Bourke, close to the Yarra, the destruction of a ten acre field by caterpillar is reported. The lightness of the Hay crops is accounted for by the same causes assigned for that of the Cereal crops—late sowing being relatively a somewhat predominant reason. The prevalent dissatisfaction at the yield of the Potato crop has invariably assigned “drought” as the principal cause, though in a good many instances “late sowing and

drought" have been given. Some good Potato crops appear in the midst of inferior yield, and the use of guano is mentioned as the cause. A good many instances of a second crop being obtained within the year are returned, though generally on a small scale. These are, however, cases on large farms. A good crop of Potatoes after Hay, Wheat and Oats is reported, also of Turnips after Potatoes; but generally speaking the second crops have been Potatoes or Maize after green forage. It is further to be observed with regard to the lightness of the Hay crop, that a considerable quantity of the land under it bears only self sown crops, and in that case the return is seldom good.

Number and Extent of Holdings of Alienated Land, Area Enclosed, and Quantity under each description of Crop in Statute Acres, in the Year ending 31st March, 1866.

CORN, PEASE, AND BEANS.

**GREEN CROPS**

NOTE.—Deficiencies in the Cereal Crops are generally attributed to late sowing; and considerable losses have been sustained from fire. The Green Crops suffered severely from the dryness of the spring, especially in the case of sandy soils. The hot winds in February appear also to have done much injury to the Potatoes.

\* For a vineyard of 50 acres no precise return of the number of plants has been obtained, but they consist for the greater part of cuttings recently planted. The vines and cuttings are computed at 136,000.

NOTE.—In the neighborhood of the Plenty and of Anderson's Creek many instances of inferior soil being placed under cultivation are reported. Wet weather immediately after sowing appears in many instances to have injured the Corn seed, and to have rotted the Potato seed. Some instances of good second crops of Potatoes are returned; and a second crop of 115 acres under Rye Grass, Clover, and other grasses is also reported. A small field of Potatoes south of the Yarra is mentioned as having been destroyed by rats and bandicoots.

\* This large return is mainly derived from 26 acres, the produce of which is given at 2086 tons, or 80 tons to the acre; and it is further stated, that 8 out of the 26 acres yielded 100 tons per acre.

† The tobacco in several instances failed completely. The cause generally assigned is the excessive dryness of the season; but in some instances it is attributed to its having been planted too late.

NOTE.—*Wheat*.—Amongst the causes assigned for cases of deficiency in this crop, *drought* is the most prominent; and this, in many instances, is accompanied with a statement of the soil being light and sandy, though there are instances of poor crops reported as the effect of dry weather, where the soil is alleged to be of fair quality, or good. Hot winds, but most frequently in the case of late-sown crops, are repeatedly mentioned. Some cases of smut are also reported, likewise injury by the caterpillar and “blight” while the crops were green.

*Oats*.—The number of complaints are not numerous respecting losses in this crop. There are some instances of poor yield, from drought, on farms where the wheat crop has been good. In the returns are included some fields of self-sown oats, the yield of which is very poor. Deep ploughing is given as the cause of a fine crop of 50 bushels to the acre. There are instances of Tartary oats yielding 40 bushels per acre, one of “Yorkshire oats” giving 38 bushels, and of 1½ acres of “white oats” yielding 70 bushels.

## GRANT—continued.

*Potatoes.* Of the large number of farmers whose Potato crop has proved an entire or partial failure, nearly 150 have reported on the causes, and the unusual dryness of the season is the prevalent reason given. The worm or grub, and, in a few cases, the cricket, have done immense injury throughout the southern and south-western parts of the county. It would seem, however, from the frequent mention, in connection with the worm, of "poor land" and "dry weather," as if the two latter aggravated the former. In the midst of places where grub appeared, there are instances of good crops, the reasons given for success being "deep ploughing," "change of seed and well manured," or "guano." Hot winds are also enumerated amongst the causes of failure; likewise "bad seed."

*Hay.*—The principal causes assigned for deficiency are "drought," "late sowing," and "hot winds;" but the average produce appears considerably reduced by the system of self-sown crops. An instance of four and a half tons to the acre is accounted for by "deep ploughing," and the owners of some very poor crops attribute the loss to "shallow ploughing."

*Second Crops.*—The number of instances of two crops having been obtained off land within the year are neither numerous nor important, being, where they occur, generally potatoes after green forage.

No less than seventeen farmers have reported either the entire destruction of, or very serious injury to, their crops by a hail-storm, the severity of which appears to have been greatest in the district west of the Little River, from the shores of the Bay to Station Peak.

NOTE.—In a great number of instances the deficiency in the crops is attributed to late sowing, and this backwardness is reported much oftener in the case of recent occupiers getting in their first year's crops. The cereal crops in the northern part of the county seem to have been affected by want of drainage; and smut is reported in the wheat on farms where the potatoes have failed from drought. In the northern parts of the county the grasshopper did immense injury, its attacks being especially directed against the potato crop, particularly it would seem in the light clayey and sandy soil, and where the pasture was most deficient. Much damage is also alleged to have resulted from wet weather immediately after sowing, as well as from subsequent severe drought.

# COUNTY OF HAMPDEN.

NOTE.—In this County, also, both drought and hot winds are reported as having impaired the Corn as well as the Potato crops. Notwithstanding this, however, instances occur of white velvet wheat sown in good land producing excellent crops. In one case, the sowing having been in June, 38 bushels an acre were yielded; and Oats, of which the seed was obtained from Tasmania, and sown in the latter end of May, yielded 44 bushels to the acre. Late sowing is also given as a cause of deficient Wheat and Potato crops.

NOTE.—Wheat.—The Caterpillar seems to have occasioned more injury to this as well as to the other Cereal crops than appears to have resulted from meteorological causes. Want of drainage is apparently a source of much loss in this county; a great deal of seed being reported as having rotted in consequence of the heavy rains in the winter and spring, particularly in the low grounds. Drought and hot winds are not often mentioned.

Oats.—Caterpillar (in some cases when the crop was nearly ripe), want of drainage causing the seed to rot from the rains which occurred immediately after sowing, and too late sowing, are all reported as causes of loss.

Potatoes.—The greatest amount of injury is attributed to the seed being rotted by wet, but considerable loss occurred in the case of late sown crops from drought. The “fly” and “the worm of a small white moth” are also mentioned as causes of failure. One acre of Potatoes, which the previous year produced 15 tons, yielded 8 tons this year.

Hay.—Poor crops are reported as the results of the self-sown system, and sowing on swampy ground.

Second Crops.—There are a few cases of average crops of Potatoes being obtained after green forage, and one after hay.

A great deal of inferior land seems to be cultivated in this county.

NOTE.—In this county the devastation occasioned by the grub has been enormous in the Wheat, Barley, and Oat crops, especially in the last named—whole fields of 10, 20, 30, and 40 acres having been annihilated. The collector states that he “saw grubs ploughed up for a depth of 20 inches at least; the soil was like a honeycomb; they appeared in a dormant state.” A farmer also observed that where the trees have been grubbed and burned on the ground, the grub abounds. The wire-worm, which is also reported to have attacked the Oats when green, is mentioned as having done much injury to the Potatoes, which crop suffered likewise from drought.

NOTE.—Want of drainage appears to be a prevalent cause of inferior crops of all kinds in this county; but in a great many instances the deficiency is attributed to late sowing. Bad ploughing is also mentioned. The injurious effects of the hot winds are generally noticed in connection with poorness of soil and carelessness in the tillage; and, on the other hand, those crops which have withstood climatic influences, or turned out well, are generally accounted for by the owners by care in the putting in, early sowing or goodness of soil. The Potatoes have been almost universally affected throughout the county by the drought; but it is reported of some good crops, that deep ploughing caused them to be little affected by the want of rain. While a great number of farmers report late sowing as a cause of deficiency, it may be mentioned that one of the best crops in the county was sown in November. Destruction of the Potatoes by worms is recorded in but two cases. One instance of injury by a hail storm is mentioned, and that a Hay crop.

\* These are for the greater part young Vines, and not planted in a separate enclosure.

† 26,000 of these are only cuttings.

NOTE.—Instances of inferior yield in the cereal crops are generally accounted for by "drought," "late sowing," and "first year's crop," in nearly equal proportions. Some corn crops in the Spring Hill district were destroyed by the grasshopper. In cases of entire failure of, or poor potatoe crops, "drought" is the

TALBOT—continued.

in the Year ending 31st March, 1860.

NOTE.—The number of instances in which deficient crops have to be accounted for are not numerous in this fertile county. As regards the Wheat crop, cases of poor yield are generally attributed to inferior cultivation, or are owing to attempts at getting crops off inferior land. Instances are noted of excellent crops of "White velvet Wheat," sown in the end of May or beginning of June, with much care, averaging 36 and 38 bushels an acre. An instance of 40 bushels an acre appears in the case of rich chocolate soil, well sown; while 16 bushels an acre only appears in the case of good soil, badly cultivated, and overrun with sorrel. The richness of some of the land in this county may be judged of from the fact, that off a farm which has been cropped for nearly twenty years, and which is overrun with sorrel and other weeds, nearly 27 bushels an acre, for 130 acres, were obtained. There are instances of injury to the Oat crop by the grub, aphid, and caterpillar—the two latter of which commenced their attacks towards the end of December or beginning of January. The Potatoe crops, according to situation, were affected by drought, late sowing, and want of drainage. Some excellent crops (in one case 8 $\frac{1}{2}$  tons to an acre) were obtained off moist, rich, deep soil. Those sown late in November and in December suffered from hot winds in January. The only instance worth recording of two crops within the year is that of a good crop of Potatoes in succession to Barley Hay.

NOTE.—The causes of inferior crops of Wheat are reported as "drought," "hot winds," "late sowing," "exhaustion of soil," and wet after sowing, where the land has not been drained. The Potatoes have mainly suffered from drought; but late sowing is also mentioned as a cause of failure, while early sowing is given as one of the principal causes of good crops. The grub attacked the Oats in a few instances, but no mention is made this year of the caterpillar.

NOTE.—In all parts of the Colony where a large proportion of new land is brought under cultivation, the fact of its being the first season, or the first crop off the ground, frequently appears as a reason for the produce being below the average, and under what may hereafter be expected from the same land; and in this district it occurs in so large a number of instances as evidently to lower the average of all crops considerably. The general failure of the Potato crop in this district, is in all cases partly attributed to drought, of which this is considered the third year in the Loddon District, and in the great majority of cases entirely to that cause. All the grain crops have suffered more or less from it; Barley seemingly more than Oats or Wheat, and Maize more still.

# DISTRICT OF RODNEY.

Number and Extent of Holdings of Alienated Land, Area enclosed, and Quantity under each description of Crop in Statute Acres, in the Year ending 31st March, 1860.

NOTE.—Where inferior Wheat crops occur they are generally accounted for by late sowing; but “new ground,” “bad soil,” and, in some cases, “wet soil,” appear amongst the causes assigned. There are also some cases of smut reported. An instance of “creeping wheat,” which yielded 28 bushels an acre on 46 acres, and received a prize, is noted. Some instances of the Oats being blighted are mentioned. Cases of entire failure of the Potato crop are very numerous. The apparently small produce of the Maize crop is partly owing to the farmers being unable to furnish returns of the quantity of produce. The average produce, however, of the area for which returns have been made cannot be considered satisfactory, having been only 13¼ bushels per acre.

WIMMERA DISTRICT.
